

Storage Technologies for SDM

Dr. Oliver Tennert, 02.07.2013 Director Technology Management & HPC Solutions transtec AG

Overview

- II Who is transtec?
- II Storage Demands in HPC \rightarrow parallel NFS
- **II** HPC Storage Solutions from transtec

High Performance Computing at transtec

More than 30 Years of Experience in Scientific Computing

1980: transtec founded, a reseller for DEC equipment
1987: SUN/SPARC workstations in portfolio
1991: IBM RS/6000 systems in portfolio
2000: "Kepler Cluster" in Tübingen installed (#215 in TOP500)
2003: transtec HPC cluster at RRZ Erlangen no. 317 in TOP 500
2005: transtec is key supplier for CERN in Geneva
2007: transtec HPC cluster at KIT Karlsruhe no. 104 in TOP 500
2010: transtec focusses on HPC as a strategic business unit
up to now: around 500 HPC installations in Europe

High Performance Computing at transtec

comprehensive solutions for High Performance Computing (HPC)

- turnkey
- caring for the customer during the whole solution lifecycle:
 - from individual consulting to managed services
 - customers have access to
 transtec benchmark center

Challenges With Simulation Data Management

- II Creation and storage of large data in a highlyperforming way
- I Access to result data for post-processing

Storage Demands in HPC

II need for computing power

- due to need to run larger and more accurate models
- more CPUs, more cores, more nodes, more RAM
- II need for network performance
 - more highly paralellized jobs
 - high-speed interconnects (10GbE, InfiniBand,...)
- → massive explosion of data sets
- \rightarrow demand for
 - large storage capacity
 - high bandwidth
 - Iow latency

Deficiencies of Today's Solutions

II most widespread solution: single NFS server

- does not scale: NFS head is bottleneck
- "high-speed" NFS server will be bottleneck by tomorrow

Deficiencies of Today's Solutions

II "clustered NFS": problematic

- either head-to-head synchronization limits scalability
- or manual partitioning of global namespace is cumbersome
- NFS is not suitable for dynamical load balancing (inherent state)

NFS 4.1 and Parallel NFS (pNFS)

- II NFS 4.1: idea to use SAN FS architecture for NFS originally from Gary Grider (LANL) and Lee Ward (Sandia)
- RFC 5661 in 2010
- II major changes to NFS 4:
 - sessions
 - directory delegations
 - pNFS (optional feature)
 - referrals → federated filesystems
- II future standard NFS 4.2 (http://tools.ietf.org/html/draft-ietf-nfsv4-minorversion2-19)
 - server-side copy
 - application I/O advise
 - sparse files
 - space reservations
 - application data-hole support
 - Iabelled NFS

Parallel NFS (pNFS)

Generic Architecture 1

- **II** scalable capacity and bandwidth
- II separation of metadata path and data path (out-of-band global namespace)
- I built for interoperability and backwards-compatibility
- II flexible design allows pNFS clients for different storage implementations (layouts)
- II global namespace eases filesystem management and job flow

pNFS: Object Layout

Generic Architecture 2

- II Panasas' contribution, based on NASD design (Network-Attached Secure Disk) developed at Carnegie Mellon University, later evolved into forthcoming SCSI OSD standard (object-based storage device)
- II layout uses SCSI object command set
- II space management built into devices
- II designed for secure access and highperformance data replication
- II cryptographically secured credentials ("capabilities") needed to access storage devices

Panasas High Performance Storage from transtec

- II Blade-based parallel NFS appliance
- II 11 blades per shelf = approx. 60 TB in 4 U
- II Approx. 1.5 Gbyte/sec aggregate bandwidth per shelf

Panasas High Performance Storage from transtec

.....

Panasas ActiveStor Specs

	ActiveStor 11	ActiveStor 12	ActiveStor 14	ActiveStor 14T
Product Focus	Balanced Capacity & Performance	Highest Performance	Price/Performance; high capacity and throughput	Highest performance for mixed workloads (large+small files)
Read Throughput (MB/sec)	1,150	1,500	1,500	1,500
Write Throughput (MB/sec)	950	1,600	1,600	1,600
File Creates/Sec. per Director Blade (Metadata Performance)	4,260	6,250	13,550	14,150
Capacity (TB)	40/60	40 / 60	80 PB	45 PB
Cache (GB)	40 + 8	80 + 12	92	72
High Availability Network Failover	Optional	Standard	Standard	Standard
Link Aggregation	No	Yes	Yes	Yes

......

Panactive Manager

- II Single Point of Management
- **II** Simple out-of-box experience
- I Seamlessly deploy new blades
- II Capacity & load balancing
- **II** Snapshots
- 1 1-touch reporting capabilities II Scriptable CLI

Easy to Manage

II Scriptable CLI II Easy web-based or **CLI-based setup**

Extensive Management and Monitoring Capabilities
